Instructions for making an lth-Tag

Required material:

1. Embroidery stabilizer - preferably tear-away stabilizer
2. Two felts - (best of embroidery felt 2mm thick) cut into 11x11 cm.
3. Depending on your preference: spray time adhesive, aqua fixation pen or remnants of adhesive fleece

1. Clamp the embroidery stabilizer

The embroidery backing is clamped drum-tight in the frame.

2. Embroidery stitch out

The marking sequence is first embroidered on the embroidery stabilizer.

Example: marking sequence embroidered on stabilizer

Stickmops-Designs

Then the felt is fixed with adhesive Spray, fixing marker, adhesive tape or the like, as desired. You can also just put the felt on, but you should watch the embroidery process to see if the felt is not shifting, so it is not recommended. The end result may depend on it.

Now embroider the felt onto the stabilizer with the next embroidery sequence.

After that the pattern is embroidered. In this example it is the Kittycorn.

Then it looks like this:

Before the third to last sequence is embroidered, you have to take the frame out of the machine and fix a piece of felt on the back with painter's tape / remnants of adhesive Stabilizer.

Then it looks like this:

Now put the frame back into the machine. With the third from last sequence, the back of the Tag is sewn into place. With the second from last sequence a marking for the eyelet is embroidered, then it looks like this:

Now you take the frame back out of the machine and carefully cut out inside the markings on the front and back. Just leave 1.5-2 mm of felt. Be careful not to damage the stabilizer when cutting out the eyelet.

If you should cut it, simply stick a piece of adhesive tape to the injured area in the embroidery stabilizer on the back of your Tag. If you don't want to cut out the eyelet, you can punch it out afterwards or press an eyelet into it.

Now you put the frame back in the machine and embroider the last sequence.

Remove the Stabilizer completely...
